.....

This research of the aimed to investigate the factor of the degree of finger and weight of the acupressure points that affect the feelings of massage. The students of Thai Traditional Medicine, Faculty of science and technology, Suan Sunandha Rajabhat University, the subjects were used in this study, were population of 100 people. The results were as the mean and standard deviation (SD) by SPSS 16.0 program. The results showed that 1) most of the sample was 32 percent female. 2) The sample has a sensation of acupressure. The hand in the supination an angle between 15 and 45 degrees, Down with weight (strength) found no difference in 15 degrees and 45 degrees, weight 50, 70, 90 pounds. 3) The sample has a sensation of acupressure point. The hand in the pronation an angle between 15 and 45 degrees, Down with weight (strength) found no difference in 15 degrees and 45 degrees, weights 70, 90 pounds, high pressure to the sensory feel of the massage. Cannot separate the feeling of lay hands at 15 degrees to 45 degrees, but the strength exerted by the weight less of 50 pounds. The sensory of sensation of the massage. Can feel at 15 degrees to 45 degrees have been different, statistically significant at the level 0.01. 4) Samples had the satisfaction of acupressure. The hand in the supination an angle between 15 and 45 degrees, Down with weights (strength) the satisfaction of acupressure point. In case of exerted weight of 50, 70, 90 pounds of pressure to the least value. Satisfaction levels of the massage. Cannot separate the level of satisfaction of the hand at 15 degrees to 45 degrees. 5) Satisfaction of acupressure. In the hand, the pronation an angle of 15 and 45 degrees, Down with weights (strength) the satisfaction of acupressure. In case of exerted weight of 50, 70, 90 pounds of pressure to the least value. The level of satisfaction of the massage. Cannot separate the level of satisfaction of the hand at 15 degrees to 45 degrees.
