---

The purposed to study the behavior time management of student in Suan Sunandha Rajabath University. The sample students are 12,167 persons including student from first year to fourth year in 2012. The tool used was questionnaires that the data were analyzed by frequency distribution. Also, using percentage, mean ( $\bar{x}$ ), standard deviation (S.D.), t-test and one-way analysis of variance (One-way ANOVA).

The results showed that the daily life activities performed student are learning, participation in activities or projects, entertainment and healthy activities. In generally students spent time on each activity is between 1-2 hours per week except the entertainment activities that the most students take 10 hours of per week.

Furthermore, the result showed that the problem to spent time, to make target in life, time management, the implementation plan of the time assessment and time improvement. The overall of problem are moderate level in all aspects, whereas the implementation plan of the time evaluation is performed at a high level.

Consequence in compare the time management's behavior of students who is studying in 1st -4<sup>th</sup> year that both to make target in life and time management are not practical difference. On the other hand, the problem to spent time, the implementation plan of the time assessment and time improvement are practical difference with statistically significant at 0.05.
