……………………..

The research aims to study ways and means of enhancing learning social networking technology to promote augmented reality for Thai Phra Ratcha Niyom through social network then assesses knowledge before and after learning and satisfaction studies approaches to learning social networking technology to promote augmented reality of Thai Phra Ratcha Niyom through social network.

The sample consisted of 60 samples of students and guests were divided into groups to learn the augmented reality for Thai Phra Ratcha Niyom through social network 30 samples and learning Thai Phra Ratcha Niyom through documents of 30 samples.

Tools used in this research were the consistency of the quality of the content provided by experts, cognitive tests before and after learning and satisfaction to approach to learning social network technology to promote augmented reality for Thai Phra Ratcha Niyom.

The results showed that

1. The achievement of learning social network technology to promote the enterprise community test sets before and after class. Results showed that after learning through learning increased.

2. The achievement of learning social network technology to promote the augmented reality for Thai Phra Ratcha Niyom higher than the achievement of learning Thai Phra Ratcha Niyom through documents.

3. Assessment of satisfaction of Approach to learning social network technology to promote the augmented reality for Thai Phra Ratcha Niyom is the mean of 4.83 and deviation equal to 0.38 and a very good level.
