

## Abstract

Research Title : Diversity of Acetic Acid Bacteria from Fermented Food  
at Dusit district Bangkok Thailand.  
Author : Ms. Tanakwan Budsabun  
Year : 2010

.....

A total of 419 strains of acetic acid bacteria were isolated from 56 specimens of fermented food from Dusit district Bangkok Thailand. Only 34 strains of all are aerobic bacteria. All of 34 strains were routinely identified as genus *Gluconobacter* 31 strains and non acetic acid bacteria 1 strain because of their oxidation of acetate and lactate to carbon dioxide and water and their growth on different carbon and different pH.
